

As part of Orsini SPI's ongoing product knowledge development initiative, the team visited Lever Electric, a partner supplying cleaning machines on our OS&E projects. The team was introduced to a range of cleaning equipment in a variety of shapes and sizes. Multi-tasking machines are the need of the day, offering hotels the ease and ability to maintain the highest hygiene standards. A quick and efficient repair service are equally important and provided free of charge by Lever Electric. It is these additional features that the Orsini SPI team looks for when sourcing partners, as it successively enables us to offer our clients more cost effective solutions.
